

Most advanced digital jukebox on the planet. Comes with H.264, HDMI and SATA . . .

Yes, it's true, We failed to find any device advanced like this, It adapts most-recent break-thru of current digital video technologies, like H,264, HDMI and SATA hard disk drive, It can go easily up to 1080p resolution as well as 1080i and 720p with H,264 decoding.

H.264 – Superb HD with reduced storage

H,264 is a brand-new and superb compression technology today, It makes you more stunning HD movie with lower storage capacity, It becomes the new compression standard and wide-spreads very quickly, TVIX 4100/5100 supports H,264 up to 1080p gracefully without any hassles.

HDMI – Pure path of digital audio and video

HDMI provides unparalleled qualities to digital video and audio, while DVI only serves digital video, You don't have to mess around with several AV cables, It provides single, pure and simple way to connect your display, It can deliver uncompressed digital video up to 1080p as well as multi-channel digital audio.

SATA – Right answer to your future storage

High capacity serial ATA hard disk drive is a way to go for your storage, It already happened in the PC area and SATA is the mainstream HDD now, It provides you a simple connection, larger capacity and easy upgradeability.

TVIX TUNER and Wireless LAN – Smart upgrade

Optional TVIX TUNER will bring you the digital TV set-top box and PVR (personal video recorder) capabilities, It can show, record and playback the whole digital TV broadcastings, Optional wireless LAN gives you the wider access of your PC and network from anywhere in your home.

And much more...

TVIX 4100/5100 retains all the virtues of previous TVIX series like DVD jukebox, ultimate movie file playback, music playback up to FLAC format, photo slideshow, USB host connectivity and Ethernet, It has another exceptional feature like fast JPEG decoding which gives you much faster photo loading.
